

VODA CASE: FJERNVARME FYN

Framework agreement, servicing and projects

Since 2018, VODA and Fjernvarme Fyn have had a co-operative partnership whereby we, among other things, assist with annual inspection of the waste-fired combustion lines at Fynsværket and provide service and maintenance of boiler pressure parts and combustion equipment.

Selected project assisted by VODA:

- Supply and erection of a new and improved economiser of 160 tons.
- The old economiser was in a bad shape and caused many unexpected shutdowns, boiler leakage and derivative corrosion – replacement of the economiser was inevitable.
- VODA won the project in a tough tender competition.

The customer's statement:

- VODA was very actionable and solution-oriented.
- VODA was focused on adhering to the time schedule and despite the challenges encountered along the way, the project finished on time because of VODA's flexible and agile approach to the work.
- Since the ECO replacement in 2019, we have broken one record after another when it comes to the amount of combusted waste and energy recovery.
- VODA understands our needs and provides value-adding services.

Execution period: 2018 – 2020

Site: Odense, Denmark

VODA's role:

Planned maintenance on Line 11, 12 & 13 and in case of breakdowns

Projects; replacement of major spare parts at the plant, i.a. ECO 1, 2, 3 & 4 on Line 13.

Engineering assignments.
